EDUCATION

University of Toronto — B.Sc. Statistics & Mathematics (Double Major) Toronto, ON • 2024–Present
Expected Graduation: April 2028 | GPA: 3.5+/4.0
Relevant Coursework: Probability & Statistics; Linear Algebra; Algorithms & Data Structures; Programming Fundamentals; Linear Programming & Optimization; Statistical Reasoning & Data Analysis

TECHNICAL SKILLS

Languages: Python, SQL, R
ML & Modeling: scikit-learn, XGBoost, feature engineering, model evaluation, threshold tuning, class imbalance handling, SMOTE
Data Engineering: ETL pipelines, REST APIs, FastAPI, SQLite, relational schemas, XML parsing, data validation, scheduled refresh logic
Python & Tools: pandas, NumPy, pytest, joblib, Streamlit, Git, Makefile, Tableau, Power BI, Excel, technical documentation

PROJECTS

- FraudOps — ML Scoring API & Monitoring Platform** June–July 2026
Python, SQLite, scikit-learn, XGBoost, FastAPI, Streamlit, pytest | GitHub: SXT2918/fraudops-risk-monitoring
- Engineered a modular ML/data platform with CSV ingestion, schema validation, SQLite persistence, feature engineering, model training/evaluation, saved artifacts, and scored-output storage.
 - Trained Logistic Regression, Random Forest, and XGBoost pipelines with class-imbalance handling and threshold comparison across 5 operating points for fraud review tradeoffs.
 - Built FastAPI service with 3 endpoints, Pydantic schemas, missing-artifact error handling, and SQLite writeback so scored transactions feed downstream monitoring.
 - Designed feature-column alignment and risk-tier mapping so saved models score new JSON transactions consistently with the training feature space.
 - Seeded 14 scored records, including 7 High/Manual Review cases, to verify the full API-to-SQLite-to-dashboard loop and make risk monitoring reviewable without manual setup.
 - Added an 8-command Makefile workflow, seed-score command, architecture docs, screenshot guide, and 26 pytest tests covering ingestion, API, database, dashboard loaders, and model artifacts.
- FinanceThat — Portfolio Data Platform & ACB Analytics Engine** 2024–Present
Python, SQLite, REST API, Streamlit, pytest | GitHub: SXT2918/FinanceThat
- Built an end-to-end data platform integrating Interactive Brokers Flex Web Service data, manual trade records, and a Streamlit dashboard for multi-account portfolio tracking.
 - Parsed XML from 5 IBKR Flex query workflows into a normalized 10-table SQLite schema with foreign keys, reducing manual reconciliation effort by 90%+.
 - Automated reusable ETL refresh logic and engineered a Canadian ACB engine surfacing realized/unrealized P&L, turnover, dividends, and proceeds simulation.
 - Implemented authentication, per-user data isolation, technical documentation, and a 99-case pytest suite across 3,600+ lines of production Python.
- Credit Card Fraud Detection — ML Pipeline & Risk Scoring** Spring 2026
Python, SQL, SQLite, scikit-learn, XGBoost, Tableau | GitHub: SXT2918/Fraud-Detection
- Built a fraud detection pipeline on 284,807 transactions covering SQL investigation, feature engineering, class imbalance handling, model comparison, and dashboard reporting.
 - Created a SQLite investigation layer with 7 analytical queries; benchmarked Logistic Regression, Random Forest, and XGBoost using PR-AUC/ROC-AUC and recall metrics.
 - Evaluated threshold tradeoffs to balance false positives against fraud coverage, connecting model outputs to review burden and operational risk.
 - Structured the repository with separate notebooks, SQL scripts, source code, dashboard assets, and dependency files for reproducibility.
- Wellspring Member Engagement — Data Quality & Statistical Modeling** Winter 2025
R, Data Wrangling, Statistical Modeling
- Cleaned 3,500+ member records and applied bootstrap confidence intervals, classification trees, and linear regression to evaluate engagement patterns and forecast attendance.
 - Removed 15%+ erroneous records through null checks, date validation, and deduplication, improving data quality before downstream modeling.

EXPERIENCE

- Quantitative Subject Lead — Literary Ripple Inc.** Toronto, ON • Sep. 2024–Present
- Built metric-based learning plans for 10+ students by tracking performance trends, diagnosing weak areas, and iterating weekly improvement goals.
 - Produced recurring progress reports that translated quantitative outcomes into stakeholder action items, improving student results by 15%-30% per semester and supporting 90%+ retention.
 - Converted client goals into measurable roadmaps and recurring review cycles, strengthening accountability and clear communication with non-technical stakeholders.

LEADERSHIP & ADDITIONAL EXPERIENCE

- VP of Events (Elected) — Chinese Music Club, University of Toronto** 2025–Present
- Built event timelines, communication workflows, and reusable checklists across performers, staff, and campus partners, improving coordination, promotion quality, and continuity.
 - Strengthened member engagement and campus visibility by preserving repeatable operating practices for future teams.
- Cultural Event Coordinator — CICSA** Toronto, ON • May–Sep. 2023
- Coordinated scheduling and communication systems across 500+ volunteers, dozens of vendor booths, and multiple stakeholder groups, improving shift coverage and issue escalation.
 - Compiled post-event financial summaries and stakeholder updates, improving budget visibility, vendor follow-through, and planning continuity for future large-scale events.
 - Supported partner coordination and multi-channel promotion efforts that contributed to a 25%+ attendance increase and stronger organizational follow-through.
